Thread: [Massive new blind molecule test](#)

Alpha Dream - December 9, 2011, 7:41 am

Im planning a massive new blind molecule testing project. About 15-20 new compounds will be tried. There will be at least a \$35 admission fee to help cover the cost of the compounds. Any compounds which are discovered and wanted will be made available - i'm expecting that at least 3 new desirable compounds will be identified. One of the compounds is a derivative of ER303.

If you are interested in participating with the admission fee please respond to this thread and I will contact you by PM.

I'm planning to finalize everything in about 3 to 4 weeks.

Chris @ Alpha

Alpha Dream - December 9, 2011, 7:43 am

Double post

2Soon2Care - December 9, 2011, 7:50 am

Lead on McMuff! Light the way to Pherovana!

paradigmshift - December 9, 2011, 8:05 am

Haha yes lead on. Im interested!

ohhmygod - December 9, 2011, 8:32 am

+1 for me

idontknow - December 9, 2011, 8:44 am

15-20 molecules?! WTF! Count me in! Let's do some research guys.

Pagodeiro - December 9, 2011, 9:36 am

I'm in

and I'm sure that JohnnyHard and XPX will participate as well !!

Pago

kmacc45 - December 9, 2011, 1:58 pm

Count me in. Chris.

Just let me know how to send the money.

JohnnyHard - December 9, 2011, 3:38 pm

What a question, I'm in and thanks Pago, but please don't drink this stuff like the last time...

NewAlpha - December 9, 2011, 3:45 pm

Yeah...Count me in !!!!

JohnnyHard - December 9, 2011, 3:52 pm

Chris @ Alpha

Wow Chris, absolute wow, 15-20 new compounds and which are discovered will be made available, with this product range and what you still have will get you a special position in the business. For me you still have it already.

Pheroquirk - December 9, 2011, 5:27 pm

Please count me in.

extraballislit - December 9, 2011, 8:51 pm

Me too.

XPX - December 10, 2011, 1:42 pm

Injektilo - December 11, 2011, 5:44 am

Same here. If there is still a spot available, just let me know what I need to do.

Alpha Dream - December 11, 2011, 9:46 am

(12-10-2011 3:01 PM)dbot Wrote: [](#)Aren't there still 2/5 molecules remaining to be revealed from the last blind test?

Ah, good point dbot..

Molecule E: 5-pregnen-3b-ol-20-one [K]+ sulfate

Molecule F: DHEAS

First round was sort of a trial run. The new project will be a lot more exhaustive in scale: trying new groups of potential pheromone compounds.

For the record, here are the names of the compounds in advance. It may be more interesting know the list of possibilities, and try to guess which ones you receive

(5 β)-ANDROSTEN-3-(CH₃)

16, (5 β)-ANDROSTENE

5 β -ANDROSTANE

5-ANDROSTEN-3 β , 19-DIOL-17-ONE (19-HYDROXY-DHEA)

5-ANDROSTEN-3 β -OL --- (17-DESOXY DHEA)

5-ANDROSTEN-3 β -OL-17 β -CARBOXYLATE

5-ANDROSTEN-3 β -OL-17-ONE ETHYLENEKETAL

5 β -ANDROSTAN-17 β -OL-3-ONE DIMETHYL KETAL

5 β -ANDROSTAN-3, 17-DIONE 3-DIMETHYL KETAL

5, 16-ANDROSTADIEN-16,17-EPOXY-3 β -OL

16, (5 β)-PREGNEN-3 β -OL-20-ONE

20, (5 β)-PREGNEN-3 β -OL

5 β -PREGNAN-3 β -OL

4-PREGNEN-3-ONE-20 β -CARBOXALDEHYDE

1, 3, 5(10)-ESTRATRIEN-3-OL (ESTRATRIENOL)

1, 3, 5(10)-ESTRATRIEN-16,17-EPOXY-3-OL (EPOXYESTRATRIENOL)

Some of these may be disqualified before the test, and others may be added.

good night guys -- it's bedtime for bonzo..

NewAlpha - December 11, 2011, 10:46 am

Unfortunately, I will leave my "spot", because if the package gets stopped by the customs in my country, that would be a nightmare, with 35 unknown chemical products ! . They do more controls since a few months. I don't know why. They even annoyed me for my favorite toothpaste that I order from the US !

That's a pity, cause the idea is very fun and exciting.

Forum Staff - December 11, 2011, 5:07 pm

It would have been nice if Chris discussed this with us before deciding to run another blind molecule test. Both of us would have been all for doing another round of blind testing, but after the difficulties we had in getting through the first one and being able to finalize reports about common observations and pheromonal properties, we would have liked to see FEWER molecules involved in any future rounds and seen them run on a smaller scale that was a little more manageable.

Instead, it appears that Chris has decided to go much bigger, with 3 times the number of molecules and god knows how many testers.

The only reason that the last round was of any success at all was due to dbot's hard efforts in going through each of the reviews and writing summaries. And, how he found the time to do it, I don't have a clue.

With that said, we want it to be understood that this project was not put together by PheroTruth, and the forum will not be involved in administering it, attempting to gather and summarize testing reports

and observations, or the pheromonal properties of molecules involved.

And, any testing will not be administered the same way the first one was, with every tester having their own private forums for reporting and nobody having access to anyone else's forum. It took a full day to configure the required private forums, usergroups and permission settings that were needed for the first round, and that was with only 6 testers, god knows how long it might take with what Chris has in mind now.

The success or failure of the project will fall entirely upon the members involved and Chris.

mark-in-dallas - December 11, 2011, 5:40 pm

(12-10-2011 3:01 PM)dbot Wrote: [](#)Aren't there still 2/5 molecules remaining to be revealed from the last blind test?

Yes there are. Several testers never reported on them, even after being asked to a couple of times, and there weren't enough reports to summarize effects.

And, the one's that were summarized and revealed can be credited entirely to you.

Forum Staff - December 12, 2011, 1:05 am

Ok so after speaking with Chris today, the forum will be involved in this round of Blind Testing, but with several adjustments made to try to provide the best chance for success.

The changes we anticipate are to substantially reduce the number of molecules each participant will be testing and run several rounds instead of one massive round. This is in the hopes that if participants only have 3 or 4 molecules to test and report on, they will actually do that testing and reporting, instead of either not reporting at all or giving up after a single report, as some seemed to do in the first round.

Secondly, and to make it easier to set up and organize, the number of testers will be limited to at most 10, instead of an everyone can join in free-for-all. Even at 10 it will take a lot of time and effort to get everything configured and the molecules sent out to participants, but it is manageable, and should allow for enough testers for us to get enough reports back to actually determine common observations and effects noticed by testers.

The molecule testing rounds will be done in stages, so that it doesn't become so overwhelming that it becomes impossible to sort through everything and provide summaries of molecule effects and observations made.

Those testers that test and review all molecules they received will have first opportunity for continued involvement in future rounds and testing programs. Those that do not will be the last in line.

We want this to be successful but also light and fun, so there will be no pressure in trying to get you to test and report on any the molecules once you receive them, but if you don't fully intend to do so and contribute to the programs success, please don't ask to participate just because you can.

Testers will have their own private forums for reporting and no other testers will be able to see inside the other testers forums, or know who else is involved in the testing. But, this time we will ask testers to help out a little by setting up the threads in their forums themselves for reporting on each molecule. Not much work for each tester to create 3 or 4 threads, but quite a bit for us to have to create 30 or 40.

we would like the participants to test and report on the molecules as quickly as possible, so that

within a month or so we can start putting together and releasing molecule summaries, instead of it dragging out for months like the first round did.

We will probably ask participants to test each molecule in sequence and set a time limit for getting their reviews in, so that this time we can quickly start summarizing and releasing information to everyone. 7 to 10 days should be more than enough time for participants to test and report on a molecule, but we'd also like your feedback on whether this seems reasonable or not,

Ultimately the success or failure of being able to create summaries lies with the participants though. With 10 testers even if we have a 40% fallout ratio we should still be able to get a general idea of molecule effects, although we would prefer a 100% reporting ratio we know that that is not realistic. The closer the better though.

PheroTruth is happy to be a part of Chris' testing program, but just wanted to try to insure the best chance for success before giving it forum endorsement.

Pagodeiro - December 12, 2011, 1:24 am

I'm happy to see this project not beeing stuck ...

and i'm looking forward to some great testing !

please add some information this time on the concentration of the molecules so that we can eventually dilute the stuff to work with low dosages !

20 to 25mcg as a starting dosage was a bit high last time .. :dash3:

Pago

dbot - December 12, 2011, 1:29 am

As a clinical researcher, I've got plenty of ideas about how to improve the success of this program. Seems like Chris isn't interested in hearing them, though, so good luck everyone!

mark-in-dallas - December 12, 2011, 1:34 am

I am also glad that it isn't derailed. We had several testers that were studious in their participation in the first round, but a couple that didn't seem to give a shit and just blew it off without explanation. They will NOT be participating in this or any future programs the forum is a part of.

15 or 20 molecules in this round of testing scared the crap out of me. It was hard enough with 6 the first time, at 3 times that I saw a nightmare in the works.

Anyway, while I didn't really see the first round as more of a test and was disappointed that it didn't turn out better, we did learn a few lessons that I think can contribute to insuring this round is a success.

Now if we can just get the molecule identification program back on track!

mark-in-dallas - December 12, 2011, 1:43 am

(12-11-2011 8:29 PM)dbot Wrote: [](#)As a clinical researcher, I've got plenty of ideas about how to improve the success of this program. Seems like Chris isn't interested in hearing them, though, so good luck everyone!

In giving credit where credit is due, the only reason the first round was at all successful was due to your efforts and hard work.

Even if Chris isn't interested in hearing your ideas if you're willing to share them with me I am!

And even though we've had our differences in the past, as far as I'm concerned it is just that, the past!

If you'd like to participate in this testing, I know that you have much to bring to the table and I am sure we could come up with a level of participation that would work for all.

Alpha Dream - December 12, 2011, 3:56 am

Quote:As a clinical researcher, I've got plenty of ideas about how to improve the success of this program. Seems like Chris isn't interested in hearing them, though, so good luck everyone!

That's not true dbot.. A lot of your suggestions are very good. The instantaneous gentleman is in the works as soon as I manage to purify the 7-keto from the cellulose and other filler.. Also 5,16-dienol is on the way.

Sorry if it seemed like I wasn't hearing you. I know you exhausted yourself with the last blind test, and everyone really appreciates all the work you put in. It has to be a group effort though, no one person here should bear the responsibility of the other participants. I completely understand if you don't want to take part in this one, however we will miss your stellar clarity of thought, writing abilities, and organization.

Quote:20 to 25mcg as a starting dosage was a bit high last time
I would have to agree on this page.. good point.. I will make the new testers in a solution of Alcohol and DPG, and make them all for 10? mcg / drop.

I'm going to tie up the loose ends on the last blind molecule test.. Thanks dbot for reminding me..

Pagodeiro - December 12, 2011, 8:43 pm

halo0073 - December 12, 2011, 9:09 pm

Is the fee still the same for only 3-4 molecules?

Alpha Dream - December 12, 2011, 9:35 pm

(12-12-2011 4:09 PM)halo0073 Wrote: [](#)Is the fee still the same for only 3-4 molecules?

I'm thinking $\$2$ per molecule would be reasonable from each participant, plus shipping ($\$3$ in US, $\$10$ international)... I hope this is possible. The compounds themselves (16 compounds total (and growing) minus eliminations from the start) will be about $\$550$ plus the cost of shipping, so I'm asking everyone to shoulder half of the cost of the molecules and part of the shipping.

If there is a backlash against this idea, seeing how I stand to profit from selling the discoveries, then I can eliminate the fee; however it would really help.

I was also thinking (just a thought) of paying a member $\$10$ in cash, or $\$20$ in credit for pheromones, for every molecule summary report (final summarization). Someone with good writing skills and organization that has time to help out on this, or maybe a few members?

Ultimately, this is all up to Mark - It's his house and we're guests in it.

Chris @ Alpha

JohnnyHard - December 13, 2011, 12:31 am

Dbot, why you don't want to be a blind tester? I would miss you...

mark-in-dallas - December 13, 2011, 1:05 am

Actually as of right now it's up to Beccah and I. she has EVERY bit as much say and authority over the forum as I.

I may be the one that started it and ultimately responsible for whatever happens on it, but I want it to be a team effort in running it and making decisions.

While it may be true that to many cooks spoil the stew, if there's only one cook their taste may differ from the many, but in having several it can help to insure more uniform acceptance and appreciation among the many.

I think that is a very good system and a very generous reward system. My name is still in the hat if you want a female tester.

Deja Vu - December 13, 2011, 1:47 pm

I am in, and definitely will contribute to the cost of the molecules!

JAYCEE - December 19, 2011, 10:58 pm

I found out last time I'm not cut out for blind testing. I get no self-effects and I have trouble seeing hits.

If you need help compiling the reports I can lend a hand with that part.

Pheroman - December 19, 2011, 11:58 pm

Maybe there should also be a general questionnaire/interview so that all participants answer the same questions.

fuzzcat - December 20, 2011, 7:33 am

I'm very interested in being a blind tester!

Grasshopper - December 28, 2011, 1:29 am

This sounds like a potentially awesome experience. If there's space available, I'd be interested.

Gojira - December 28, 2011, 6:08 am

Sounds really cool.

The suggestion of a questionnaire is very good, or at least a basic format to follow for reports.

I'm still waiting for my first mone in the mail, so I wouldn't be any help as I've got no experience -- Wanted to chime in and say this is really cool, great thing for a community of enthusiasts.

~Gojira.

Alpha Dream - January 9, 2012, 6:20 am

We are now gearing up for the first wave of molecule testing. I expect it to be rolled out within the next two weeks. I've been extremely busy with work, so please bear with me and forgive any delays :)

wiserd - January 29, 2012, 3:53 am

(12-09-2011 2:41 AM)Alpha Dream Wrote: [](#)Im planning a massive new blind molecule testing project. About 15-20 new compounds will be tried. There will be at least a \$35 admission fee to help cover the cost of the compounds. Any compounds which are discovered and wanted will be made available - i'm expecting that at least 3 new desirable compounds will be identified. One of the compounds is a derivative of ER303.

If you are interested in participating with the admission fee please respond to this thread and I will contact you by PM.

I'm planning to finalize everything in about 3 to 4 weeks.

Chris @ Alpha

I'm in. Any chance we can get the stuff in a non-silicone base? It's easier for me to test things if I can switch them on and off, and even many of the good pheromones aggravate my ADD. If P-glycol isn't an option things are still all good.

Thanks!

Alpha Dream - January 31, 2012, 6:57 am

Whats up people,

Delays on blind molecule test: I apologize for this, I have been swamped with wholesale work, but it's back on track now..

As soon as I get back on Feb 6-7th, the first wave of blind molecule testing will begin - 4 compounds... Not sure who's going to organize it, but that's up to the forum and forum staff. I'm the chemistry geek, I'm just selecting the molecules and hoping the pieces fall into place.

Mark, please let me know who has been selected before feb 7th, with names & addresses, up to 10 total, up to 4 international total.

Cheers,

Chris @ Alpha

Hey Chris. Congrats on having tons of wholesale work.

Two questions, if you don't mind;

1. What were the issues you had with neno? You said it didn't work in Glace. What was the effect? Neno seems to have some anti-GABAergic activity, while a-nol has GABAergic activity (GABA-A). Would that account for the effects you saw? Two molecules canceling each other out? I don't know what other effects these molecules have, outside that receptor sites.

2. I don't know if the molecule below is available for purchase or active as a pheromone, but I figured It'd be worth putting forward to see what you thought. Is 20R a long carbon chain that's too heavy to fly? I'm drawing a blank on my o-chem taxonomy and I don't remember what those 20s in parentheses are.

Quote:The goal of this study was to develop a series of allopregnanolone analogues ... to modulate GABA(A) receptors. ...

The most active derivative is (20R)-17beta-(1-hydroxy-2,3-butadienyl)-5alpha-androstane-3-ol (20), which possesses low nanomolar potency to modulate cerebellar GABA(A) receptors and is 71 times more active than the control compound allopregnanolone.

<http://www.ncbi.nlm.nih.gov/pubmed/16078839>

Thanks for any info.

Alpha Dream - February 11, 2012, 3:38 am

4 new blind molecules: starting week of February 20th...

Some very cool molecules being tested here. The best of the best to be tested in this first round.

My cost is a thousand dollars for all compounds total. Your cost to participate is zero + free shipping.

Need 10 testers in total. Forum admins, please prepare for it. R. Wise is the only dedicated member so far, leaving 9 slots open.

Stay tuned for more info...

I am interested as I said before if you want any females.

txi0m - February 11, 2012, 7:25 pm

I'd like to participate, but I'll take my place in line. If slots are full already from an earlier call for testers that's fine.

In any case, I would be a US based tester.

Fly So Hi - February 12, 2012, 12:15 am

I would love to test! But many molecules in the line yet and tricky moment for me now. So i'll leave my slot to another interested person.

Thanks again for all Chris. You rock.

Gojira - February 12, 2012, 12:46 am

I would love to test, this sounds epic.

preck - February 12, 2012, 1:59 am

I am in!!

Alpha Dream - February 12, 2012, 2:17 am

I really need some help from admins with setting this thing up.. I will talk to mark tomorrow, and try to work something out with pago.. Any ideas will be truly welcomed.

My role is to provide the molecules.. I need some others to help with the arrangements for reporting and forum organization.

dexter - February 13, 2012, 9:41 am

If there is a spot for me, I'm in. If you need paying rats, I'm still in. If it's really full, and it looks like it is, well, that's good too.

mark-in-dallas - February 13, 2012, 1:14 pm

Chris we will setup the forums and member permissions for blind testing, but this is your show and you will need to be actively involved with the members, and the one to write and provide general summaries as the reports come in.

You stand the most to gain from the testing, have expectations of what effects the molecules should elicit, and need to be the person running the show, interacting with members and compiling the results.

We've had a couple other companies in just the last month that have wanted to PAY us to test new products and do market research for them and we turned them down. But, we did offer to allow use of the forum and members to test and report on their products though, making it clear that they would have to be actively involved in communicating with members and assembling the product summaries themselves.

We are happy to provide a venue for companies to beta test new products, and doing so fits perfectly with what PheroTruth is all about. But, we cannot and will not administer these programs for them, or we've lost sight of our vision for the forum and taken the first step in turning it into a commercial business venture.

Administering blind testing programs fall under the category of market research, and big companies pay large sums of money for this service to get feedback on new products or concepts.

We are not a market research company, will not become one, and don't want to give off the impression that the forum may be available for hire, for any type of service.

Sptsmed - February 13, 2012, 2:09 pm

I am late to the party as the weekend called for work, and OK, some fun too But I would love to get in as well.

wiserd - February 13, 2012, 5:48 pm

Well, if the notion is that Chris is providing the molecules free so we should pick up some of the effort regarding tabulating results... I suppose I could help out. I don't have a huge amount of time to contribute and don't want to over commit. But if someone wanted to offload a few hours of tabulating results on me (I'm in the study) or something like that I suppose I could pick up my end of things.

Alpha Dream - February 13, 2012, 11:03 pm

I have most of the compounds in-hand.. As soon as we can figure out how to structure the test, it will be started. So when we roll this thing out is up to the forum in general.

There can be up to 10 testers of each compound. I would be grateful if at least 2/3rds report back. Anyone that wants to participate, please post. I will announce the 10 testers selected soon.

Cheers,

Chris @ alpha

PS.. Pago, is it possible to take the "massive" out of the title of this thread?

Sptsmed - February 13, 2012, 11:12 pm

Although if I miss out on this just the stuff I have purchased from Chris in the past thirty days should keep me testing new combos, 3 Glace, 3 AM, corpo and five or six single molecules, yes this past two months I have been on a mone spending spree LOL.

Gojira - February 13, 2012, 11:25 pm

I've barely got two dimes to rub together, and I just sent one of them to Chris! We understand the urge to try new things !!

I'm a huge poster on a Bass guitar forum, one of the terms we use all the time is GAS, it stands for "Gear Acquisition Syndrome".. It seems pretty consistent with how members are here as well

Sptsmed - February 13, 2012, 11:37 pm

I have a 35 foot Searay that is probably not happy that I am spending money on pheromones and not investing more into navigation systems and such, but oh well, life is good

Alpha Dream - February 14, 2012, 12:43 am

It brings me great satisfaction to know you guys enjoy the products!

That's the great thing about running this company.. Not just for the income, but knowing that my products can genuinely enhance people's life. Gives me a reason to get up each morning and press onward with research.

Cheers,

Chris @ Alpha

To be congruent with your products, you might have to move to a beach house in Laguna or Newport Beach.

I lived in Laguna for 8 years and Newport for 3.

Grasshopper - February 15, 2012, 10:26 pm

I'm still interested in getting involved. Keep us posted.

Alpha Dream - February 15, 2012, 11:04 pm

(02-15-2012 5:26 PM)Grasshopper Wrote: [](#)I'm still interested in getting involved. Keep us posted.

Well, like I said earlier, it's completely up to forum admins to get this thing started. I'm ready now, the forum isn't ready...

Until you announce your testers there ain't really anything for us to do!

And, getting reports from 2/3 of the testers is unacceptable! All testers should be expected to commit and report on each of the molecules received!

I don't think there's any member here that would be willing accept being paid for only 2/3 of their work, and it's quite a bit of work for us in setting up reporting forums for each blind tester, configuring the forum permissions, setting up usergroups and permissions for each blind forum, placing the teters in those usergoups and again changing their permissions.

If 1/3 of the time we spend setting everything up turns out to be for nothing, it will probably be the last blind testing we do on the forum.

The last time around we had 5 testers, but 2 of them pulled out after receiving the molecules and sent them to other members so we had to go back and setup everything for 2 new people, then a third wrote one report on one molecule then blew the whole thing off.

We ended up getting reports from 4 of 7 testers that had promised to participate, which means that just under 1/2 the time and effort that went in to making the blind testing happen was for nothing.

Alpha Dream - February 16, 2012, 1:30 am

Here are the willing participants I've chosen for this blind test:

wiserd
Pagodeiro
halo0073
txi0m
dexter
Deja Vu

Sorry for anyone who didn't get in, there will be other blind tests in the future (if things work out here) and your names are first on the list.

Mark, can we go with six testers?

halo0073 - February 16, 2012, 1:46 am

Yay! Thank you!!!!

mark-in-dallas - February 16, 2012, 5:04 am

I will have everything setup by the end of the day tomorrow or Friday morning. You and Amara were supposed to call me at 5:00 but I never heard from you! What happened?

Pagodeiro - February 16, 2012, 6:09 am

JohnnyHard and XPX committed to participate as well !

Pago

wiserd - February 16, 2012, 7:05 am

W00t.

p.s. For future testing, if it's helpful, I could set up a moodle installation on one of my servers that could help with blind testing. They're pretty configurable.

Alpha Dream - February 22, 2012, 12:12 am

Here is the updated master list of compounds which have been selected for evaluation. The compounds involved with this first round of testing will include those among this list that I believe to be most valuable.

Two compounds have been preselected to be included:

20-(5beta)-Pregnen-3-Alpha-ol (Derivative of ER303).

1,3,5(10)-estratrien-16,17beta-epoxy-estratrienol (This is an old one from the love scent days, which was very interesting but never tested properly). Also known as EpoxyEstratrienol.

Three other randoms..

The first samples will be shipping out in a few days.

Chris @ Alpha

dexter - February 22, 2012, 1:13 am

I got mad at one of my guys at work, because I told him "Here is your job, just keep running at that wall full speed." And he said that he wasn't going to do it. He didn't want to put effort into something if in the end, we were going to use another method and his effort would be wasted. I told him to "Be a good soldier, and just keep running at the wall." Well, he isn't working for me anymore.

I think that testing these molecules will be like that. Just keep running at the wall, recording all the

pertinent details about yourself, environment, and others that you can. And in the end, ONLY AFTER the results are in, we can combine results and see what was common between different testers.

It may turn out that some molecules have no real effect, and our efforts were just running into a wall with nothing to show for it. But Just keep running at the wall.

Alpha Dream - February 26, 2012, 6:08 am

So there are all the compounds to be evaluated... All 31 of them (with one more on the way) in total. Most of them will be eliminated, however I can tell already that there will be a few true gems hidden in here...

I've chosen 6 compounds for this first blind test, and have made concentrates from them. I'm going to dilute them to 5 mcg per drop, just like the single molecules I offer.

I'm going to start sending these out on Tuesday. Someone outside of the testing group will get a surprise delivery next week.

From what Ive seen tonight while working on this: I think this blind test will be very interesting indeed.

One had an instantaneous effect -- I felt the "[presence](#)" of a human being with this compound.

Chris @ Alpha

wiserd - February 26, 2012, 9:27 am

(02-26-2012 1:08 AM)Alpha Dream Wrote: [](#)One had an instantaneous effect -- I felt the "[presence](#)" of a human being with this compound.

Awesome. Yeah, a coworker described that kind of effect once without knowing I was using pheromones. She said she was in the elevator alone and didn't believe in ghosts but insisted that another person was in the elevator... I must have rubbed off on a rail or something.

dexter - March 9, 2012, 12:45 am

ok, i'm still stoked about this, when are the testers going to be rolling out?

Sillykitty - March 9, 2012, 5:32 am

I'd be happy to be a tester, if you need any more ladies.

zerosix85 - March 9, 2012, 6:01 am

I would like to roll in on testing when I eventually qualify so

dexter - March 9, 2012, 4:54 pm

(03-08-2012 7:45 PM)dexter Wrote: [](#)ok, i'm still stoked about this, when are the testers going to be rolling out? By "TESTERS" I meant 5mL spray tubes. Just in case anyone thought I meant "GUINEA PIGS".

GUINEA PIGS do kindof roll, a little.

Fly So Hi - March 9, 2012, 5:13 pm

Alpha Dream - March 13, 2012, 5:05 am

Hey Dex and Txiom, need your addresses by PM

halo0073 - March 15, 2012, 6:24 pm

Chris, a few basic questions. How many sprays do you want us to start off at? And how many would you like us to go up to? How many days each? How long would you like us to spend on each molecule before we move to the next? I am not sure how long you want this project to stretch out. Also I know you told me which ones are the most female...do you want me to spend more time on those?

Thank you! This is really exciting.

txi0m - March 16, 2012, 3:12 pm

Sorry to keep you waiting Chris-- totally unintentional.

I've got the same question as halo. If the recommended dose is the same as usual A-D products.. then 2-3 sprays? (or if samples, like these, then 3-5 sprays?)

dbot - March 16, 2012, 3:25 pm

Unknown molecules = start at one spray (5mcg) and go up slowly as you learn about the effects.

halo0073 - March 16, 2012, 3:26 pm

(03-16-2012 10:12 AM)txi0m Wrote: [](#)Sorry to keep you waiting Chris-- totally unintentional.

I PMed him with some of these questions yesterday and he told me to start with one spray and add more one by one until effects are seen. He also told me to test them in whatever order I wanted to. Make sure you test C on your clothes or in the air because it can be irritating to the skin.
